Conditional promises are not realized transshipments

Negotiation precedes current demand. Physical dispatch is decided only by the fixed post-demand feasibility recheck.

PRE-DEMAND | local information + exposed forecasts + received peer messages

1 Local observation
Own inventory / pipeline
Forecasts / local costs

→

2 Deterministic Skills
Evaluate shared frozen GP
Apply fixed roles and caps

→

3 R peer rounds
Positive-gain mutual best
Reserve and confirm

→

4 Conditional promises
Commit q_commit by partner
No physical dispatch yet

EVENT BOUNDARY: due arrivals → current demand → actual inventory and unmet demand

POST-DEMAND | fixed physical execution

5 Feasibility recheck
Actual donor / receiver state
0 ≤ q_exec ≤ q_commit

→

6 Realized flow
q_exec from actual feasible bounds

→

Full
q_exec = q_commit > 0

Partial
0 < q_exec < q_commit

Cancelled
q_exec = 0

→

7 State and accounting
Costs + losses
Pipeline update
Release reservations
History: actual flow only

No post-demand oracle during negotiation.
A promise can execute fully, partly or not at all.
